PROFILE

Software developer in training focused on building modern, functional, and visually clean web solutions designed to solve real-world needs.

Currently strengthening skills in frontend development, user experience, and English for professional and technical environments.

FEATURED PROJECT

AgroHelper Lusitania

Development of a web platform focused on cattle management and internal process administration for Hacienda Lusitania.

- Implementation of CRUD modules for employee, task, and administrative request management.
- Development of authentication and role-based access control systems.
- Frontend/backend integration using HTML, CSS, JavaScript, PHP, and MySQL.
- Implementation of notifications and dynamic content updates.
- Design of responsive interfaces focused on user experience and visual clarity.
- Development of interactive modals and custom visual components.
- Modular code organization and version control using Git and GitHub.

EDUCATION

ADSO — Software Analysis and Development **National Learning Service (SENA)**

Training focused on web development, databases, programming logic, and business-oriented software solutions for real-world environments.

PROFESSIONAL GOAL

Continue growing as a software developer by contributing to projects focused on web development, system integration, and real-world solutions while improving user experience and modern technologies.
